

Impact where it matters.

Trials.ai Backend Code Review

The objective is to gauge your code understanding and reasoning skills.

Files

document_structure_types_handler.py

This is the component that should be the focus of the review.

deps/*

The files in deps/ are provided for context. Review comments for these files are optional.

Task

Perform a code review on document_structure_types_handler.py.

This exercise shouldn't need to take more than 30 min.

Additional context

- DocumentStructureTypesViewSetHandler is called from a Django ViewSet controller with the request object.
- The create function handles a POST request for creating something called “uncurated term” and connecting it with a new “document structure”. In addition, there’s also a separate API endpoint for creating just the “uncurated term”.

Post review

We'll walk through your review comments.

Use of AI or tools

The task is created to gauge your code understanding and reasoning skills. Use of any tools is therefore discouraged.
